

“By 2020,

the number of everyday objects,
or “things,” connecting to the internet
will exceed PCs and smartphones.”

MIT Technology Review, Business Report, 2014

Bluetooth[®] Low Energy Innovator Suite

Includes the
ComProbe *Bluetooth*
low energy **analyzer**,
thorough device
testing, and a detailed
report of **results and
recommendations** -
the most complete
and cost-effective
solution for developers
of *Bluetooth* Smart
devices to ensure
quality, reliability and
interoperability in a
rapidly growing field of
consumer products.

TOOLS

We equip you with the very same tool the experts use to isolate and diagnose elusive protocol-related issues on their *Bluetooth* Smart and Smart Ready devices.

Smaller than a deck of cards and USB-powered, the ComProbe BPA low energy goes with you to decode all low energy traffic, revealing your device's protocol-related conflicts, problems and implementation issues and giving you **the best chance at bringing a robust and reliable product to market.**

RESULTS

At the end of testing, we'll compile the *Bluetooth* low energy Innovator Suite report with details about the test itself, the application and discovered services, and any interoperability issues we observe, along with supporting documentation and capture files.

Our recommendations section will put your device on track for **reliable interoperability with other devices, and compliance with the latest Bluetooth specification.**

TESTING

Using a test plan tailored to your product's supported services and target market (Health and Fitness, Medical, Home Automation, etc.), we determine how well your device works with the most popular products on the market.

With a repertoire of mature and proven test plans and a library of over 1600 devices, **Frontline** is a **comprehensive and affordable extension of your QA department.**
